

PROFILE

I am a Lead Flex and Actionscript 3 RIA Architect. I developed a passion for coding and multi-media experiences in the Flash Player around the year 2002. I started out developing web sites and promotional projects for many of the bands and record labels in Nashville TN. This quickly allowed me the experience of developing for clients that had super tight deadlines and team collaboration is key in making the projects meet there goals.

After devoting so much of my time developing Flash sites and applications I took that a step farther and started doing real development on the Flash platform using the Flex framework. This has also lead me in to developing in other languages such as Java, PHP, Groovy, and Coldfusion.

Over the last couple of years some of the applications that I have gotten to develop are things like Chat using Flex and XMPP server, Live Video streaming applications using Flex and Red5 (and FMS server written in Java), scheduling app using Flex and AMFPHP, and the usual multi-media apps using sound, video playback and images.

I stay really involved in the Flash and Flex community by running the Nashville Flash Platform User Group and posting development examples and tutorials to my blog.

Over all being a developer and using my skills to solve problems is the coolest thing ever and I love what I do.

SKILLS, SOFTWARE & TRAITS

KEY SKILLS:

- Flex 2.0, 3.0, 4.0
- Actionscript 2.0, 3.0
- AIR
- MVC Architecture - Cairngorm
- MVC Architecture - Parsley / Spicefactory
- Flex Skinning & Styling
- Flex States, Transitions, & Effects
- XML, Web Services & RemoteObject
- System Analysis and Design
- Red5 (Java based FMS server)
- Flash Media Server 3
- Java
- Groovy
- Grails
- ColdFusion
- XMPP Jabber communication with Flex
- PHP
- Javascript
- CSS
- HTML

SOFTWARE:

- FlexBuilder 2.0, 3.0
- FlashBuilder 4
- Flash IDE
- Eclipse
- Subversion
- Bugzilla
- Photoshop
- Illustrator
- Fireworks
- Coda

KEY TRAITS:

- Ability to think through the problem and come up with a solution
- Willingness to learn new technologies fast.
- Excellent communication skills
- Ability to use the resources around me to finish the task
- Strong sense of what the user needs and how they will use the application
- Work really well with other developers and able to know who is best for the solution

EXPERIENCE

SENIOR FLEX / FLASH CONSULTANT OCT 2009 - PRESENT

Adobe Systems / Technical Services - Developer on a project for “World Economic Forum”

Adobe Technical Services brought me in as a consultant to work for their client, [The World Economic Forum](#). The project has consisted of taking their existing web application and converting it to a Flex app that uses Live-cycle Data Services to use their existing web services to supply the app with data. The app that we are building will be used by World Economic Forum members as they attend the January Meeting and all the other meetings throughout the year. The app allows members to look at sessions, Forum news and events, allows members to meet and form groups, attend sessions at Forum events, manage their agenda and much much more.

- Built the credit card transaction interface for the application. This allows the user to add, edit and confirm their credit card information.
- Built the interface and functionality to allow users to add and remove conference sessions to their personal agenda. This helps the user keep track of what sessions they will be attending during the Davos conference.
- Built an interface that will allow users to add personal calendar or agenda items to their calendar. The functionality also allows the user to view, edit and remove the same items.
- Continued helping the team fix application defects and do testing on existing code and features that have been built over the life of the project.
- Implemented UI designs for Flex components and features.
- Helped with code refactoring and performance testing.

SENIOR FLEX / FLASH DEVELOPER APRIL 2008 - SEPT 2009

Moontoast LLC - Online community for learning.

- Built the Moontoast Live Video and Chat application built using Flex. The app connects the users via a live video stream. The application also allows the users to share files with each other.
- Built a Red5 FMS Java application that allows the Moontoast Session Player to stream video, share files, chat with users and Authenticate users against the Database for starting the video session.
- Architected a Flex based calendar / scheduling application. This Flex app allows Moontoast users to set available time and other users can view the calendar and select the time they would like to book with that user for a video session.

- Video player application that will allow users to show sample videos of there work built in Flex and all real time data was to be passed back and forth using AMFPHP.
- Moontoast Chat application hooks up the logged in user to chat with other users built in Flex and hooks up to a Jabber XMPP server to handle chat messages.
- Rating stars is a small Flash app that I built. Users hover over the star rating and click to submit a rating on a user that you participated in a session with. This app sends the rating to the server using AMFPHP calls.
- Flex and Flash Skinning was all coded and completed by me after the design handed off the mockups.

Remarkable Wit LLC - Web development shop

- AmericanSongSpace.com - Developed a MP3 player application for song writer profiles on the site. Each user could create a playlis. The songs for that user would be loaded into the application when you go to that users profile. Added features allow you to search the playlist in the player itself.
- AmericanSongSpace.com -Song Cropping tool built in Flex allows users to load MP3 files into the app and slide a slider to store the 30 sec. cropped area to the database.
- AmericanSongspace.com - Photo Cropper. This is a Flex application that allows users to upload a photo for the profile avatar. The photo is loaded and the user can resize the image and the new image is saved by sending Base64 data to the server.
- AmericanSongSpace.com - Mini mp3 player built in flash. This is to play a single song next to a each song on a search results page and also next songs that are loaded on the homepage and just about anywhere on the site they want to show a preview of a single song.
- AmericanSongSpace.com - Song Uploader was built for a section of the site that users can run contests around a particular song. The app is a simple flash app that allows the user to upload a song to there contest page.
- Moontoast LLC- Remarkable Wit LLC development team Merged with Moontoast most 2009 so most of the applications for Moontoast LLC listed above started development when the company was just Remarkable with. (*Session Player, Calendar app, Red5 development, Video player, Rating stars*)

PRESIDENT AND FOUNDER OF NASHVILLE FLEX / FLASH USER GROUP — 2006 - PRESENT

Nashville Flex / Flash User Group

- Founded the group and started meetings mid-summer 2006 grew membership to over 50 by end of year
- Set up meetings, schedule presentations and teach at meetings.
- Involve myself in the Flex and Flash community nation wide so that I can provide the best info possible to the user group.
- Attend Monthly Flex Manager Meetings with Adobe.
- Early 2007 we had our first Adobe Flex Tour event with Ben Forta of the Adobe Evangelist team. I hosted the event and brought in lots of sponsors and helped grow the Flex community and added to our membership base and grew the group to over 90 users.
- Grew the group to over 100 Users by end of 2007.

- Managed another User Group tour for Adobe 2009 with Gregory Wilson in support of the Flex 4 release.
- Administrator of the user group site <http://615flex.com> now in transition to become <http://615flash.com>

MATTHEW WALLACE WEB DEVELOPMENT — 2004 - 2008

BuzzPlant Work

Micro sites and ecards

- Move photo shop mockups into Flash assets
- Add animation and functionality to elements such as menus and artwork that needed animations and transitions
- Create multi-media aspects to the projects such as video and music players
- Grab artist or site data and load dynamic data via database calls or XML

Echo Music (Now Ticketmaster)

Micro sites and ecards

- Move photo shop mockups into Flash assets
- Add animation and functionality to elements such as menus and artwork that needed animations and transitions
- Create multi-media aspects to the projects such as video and music players
- Grab artist or site data and load dynamic data via database calls or XML

Sitening

Best Magazine by Best Buy

- Take the Best magazine assets from PDF documents and some photoshop files and create page layouts that would work with in the Flash Application that will be showing the content
- Create Flash Animations of some of the products with in the magazine so they could show functionality or add nice transitions to he pages
- Load dynamic data such as magazine article content via XML or provide layers of content with in the application to load the magazine data.

Radiant Ministries

Flash based web site for a youth conference

- Design, and develop site flow and mockups
- Created complex animations and transitions for the site
- Load dynamic data via XML files to populate site

- Create Paypal ordering system for booking registrations and also selling t-shirts

Vacuum Center

- Design new layout and assets for the site
- Created Shopping cart based site using ecommerce platform.
- Custom PHP work to get some of the shopping cart features and account functionality that the site needed
- Move existing inventory from the old site to the new
- Hook up all the payment authority and authorization functionality via credit card processing company, paypal, and google checkout.

Caterer Connection

- Design and mockup layout for the web site and architect what type of solution we should use for the site to do membership and payment processing
 - Build an account driven site that caterers can join and build menus of food items they can offer at events.
 - Build a PHP based shopping cart so the caterers can pay a monthly fee to offer there services on the web site.
 - Build a contact form and booking solution so users that are not caterers can order the menu they would like, date they would like the event catered and submit the info for review by the caterer.
-
